

Sinuplasty

lenio

Now available - Our new easy to use **lenio**® Balloon Catheter System for the minimal invasive treatment of chronic rhinosinusitis. It is our goal to have more patients benefit from early treatment and relief of chronic pain, infection and breathing problems associated with chronic rhinosinusitis. Our **lenio**® Balloon Catheter System is specially designed for easy application and safe dilation of the affected sinus ostium to restore normal drainage and function.

lenio®

Sinuplasty System

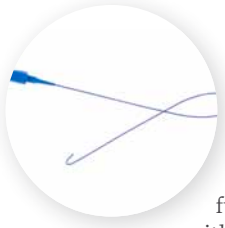

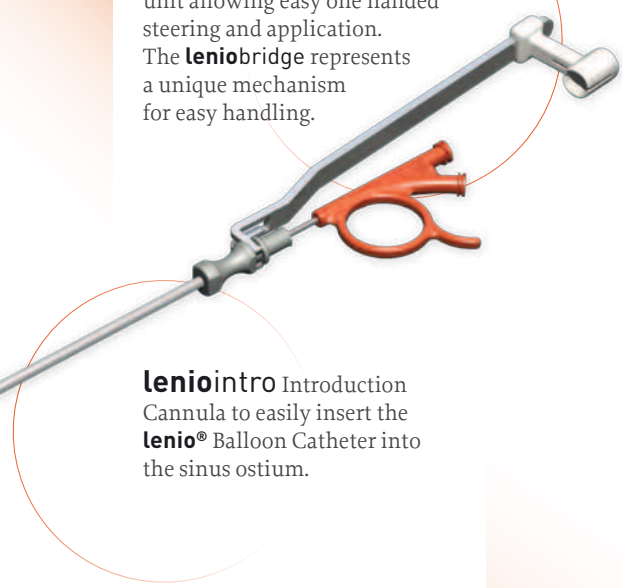

The Joline lenioflex System consists of:

leniocat Sinus Balloon Catheter to effectively restore natural drainage of the sinuses by preserving the delicate mucocilliary tissue structure. The **lenio**cat is available with a cylindrical balloon or with a special tailored (waisted) balloon for safer positioning.

leniobridge Ergonomically designed handle to connect all **lenio**® components to one unit allowing easy one handed steering and application. The **lenio**bridge represents a unique mechanism for easy handling.

leniointro Introduction Cannula to easily insert the **lenio**® Balloon Catheter into the sinus ostium.

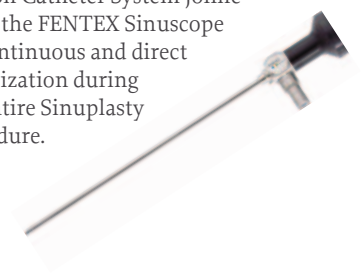

lenioguide The kinking resistant Nitinol guidewire to safely guide the balloon catheter into position. **lenio**guide Light is available with light transmitting function. Joline also offers the **lenio**guide Standard without light.

lenioinflation The inflation device ensures a controlled expansion of the balloon and offers an accurate pressure monitoring.

Additional to the **lenio**® Balloon Catheter System Joline offers the FENTEX Sinuscope for continuous and direct visualization during the entire Sinuplasty procedure.
